CRIMINAL JUSTICE AGENCY PROCESSING STATISTICS

FY 1983
vs.
FY 1982

OFFICE OF THE SECRETARY
OFFICE OF RESEARCH AND STATISTICS

CRIMINAL JUSTICE AGENCY PROCESSING STATISTICS

INTRODUCTION

IN AN EFFORT TO ASSIST DECISION MAKERS, THE OFFICE OF RESEARCH AND STATISTICS DEVELOPED THIS DOCUMENT TO PROVIDE A SYNOPSIS OF THE TRENDS IN CRIMINAL JUSTICE PROCESSING STATISTICS WHICH HAVE OCCURRED OVER THE MOST RECENT FISCAL YEARS. AN EFFORT HAS BEEN MADE TO CAPTURE ON A MONTHLY BASIS STATISTICAL DATA WHICH PROVIDES SOME INDICATORS AS TO THE CHANGES IN OFFENSE AND ARREST PATTERNS, LOCAL JAIL POPULATIONS, PAROLE AND PROBATION CASELOADS, STATE CORRECTIONAL INSTITUTION POPULATIONS AND PAROLING AUTHORITY ACTIVITIES. IN EACH SECTION OF THE REPORT A BRIEF DESCRIPTION OF THE DATA SOURCES AND RECENT TRENDS IS PRESENTED. THIS REPORT ACTS AS A 'SNAPSHOT' OF THE EVENTS WHICH HAVE OCCURRED OVER THE PAST TWO FISCAL YEARS. CAUSE-EFFECT RELATIONSHIPS CANNOT BE DRAWN FROM THE VARIOUS DATA PRESENTED. HOWEVER, RELATIONSHIPS IN TRENDS CAN AID USERS OF THIS DOCUMENT IN OBTAINING A PICTURE OF POSSIBLE FUTURE TRENDS.

OFFENSES AND ARRESTS

Data Sources

The information contained in the offenses and arrests section of the Agency Processing Statistics is based upon data tabulated through the State-wide Uniform Crime Reporting program managed by the Maryland State Police Criminal Records Central Repository (CRCR). Each month summary data on offenses and arrests is compiled and submitted to CRCR by each of Maryland's 134 law enforcement agencies. These reports are then edited and prepared for data entry. Computer generated output reports are then produced to summarize the information received in a variety of formats. CRCR then provides monthly summaries of the offense and arrest data to the Office of Research and Statistics.

Comparisons of data trends occurring between FY 1982 and FY 1983 have been graphically depicted in charts. Index Offenses - Total, Property and Violent are displayed (page 3) as well as a comparison of Total Offenses (reported) and Adult Arrests (page 4). Data associated with these graphs is provided in tables for each fiscal year (pages 5 and 6). A quarterly comparison of the change in reported index offenses over these two fiscal years is also provided (page 7).

Recent Trends

Total offenses were down 7.3% from 265,384 in FY 1982 to 246,085 in FY 1983. This decreasing trend occurred in each index crime category with the exception of Aggravated Assault which increased slightly from 18,239 in FY 1982 to 18,450 in FY 1983, a 1.2% increase. Combined categories of offense data shows that violent offenses (murder, rape, robbery and aggravated assault) decreased 2.5% from 36,680 in FY 1982 to 35,781 in FY 1983. Property Offenses (burglary, larceny and motor vehicle theft) decreased 8.0% from 228,704 in FY 1982 to 210,304 in FY 1983. See page 3 for a visual comparison and pages 5, 6 and 7 for the actual data.

Adult arrests (those individuals 18 and over) increased 6.4% from 162,291 in FY 1982 to 172,665 in FY 1983. This growth is a continuing trend in that the number of adult arrests for FY 1981 was 143,313. The chart on page 3 depicts the monthly adult arrest trend based on the data in the tables on pages 5 and 6. Of interest in this chart, and somewhat difficult to understand at first glance, is how offenses can be going down while adult arrests are going up. It should be noted that the offense data is collected for only index crimes (murder, rape, robbery, aggravated assault, burglary, larceny and motor vehicle theft) and only when they are reported. Arrest data encompasses not only index crimes but other crimes. These other crimes are generally considered less serious and include such offenses as simple assault, possession or sale of drugs, sex offenses other than rape, weapons possession, fraud vandalism, etc. These two sets of data (offenses and arrests) are mutually exclusive and difficult to compare to each other. Therefore, no direct relationship between these two divergent trends can be drawn.

Data on juvenile arrests (those individuals 17 years old or younger), see tables on pages 5 and 6, shows a declining trend. The number of juveniles arrested in FY 1983 was 40,776, an 11.0% decrease from the 45,822 juveniles arrested in FY 1982. The number of juvenile arrests for FY 1981 was 49,962 indicating this decrease to be a continuing trend.

LOCAL JAIL STATISTICS

Data Sources

The information contained in the Local Jail Section of the Agency Processing Statistics is based upon manual data submitted by local jurisdictions to the Maryland Commission on Correctional Standards. Staff of that agency tabulate and summarize the submitted data on a statewide basis. The total Average Daily Population in Local Jails (page 9), Local versus Division of Correction inmates in local jails (page 10) and the Awaiting Trial, Pre-Sentenced and Other [jail population] (page 11) provide graphic comparisons of the changes in these populations over the past two fiscal years (1983 and 1982). Data used for developing these charts is displayed in the tables at pages 12 and 13.

Recent Trends

The average population in local jails increased 5.1% when comparing June 1983 (4,529) with June 1982 (4,308). The growth is somewhat smaller than the 12.5% increase experienced 12 months earlier, i.e. the 4,308 June 1982 average population compared to the 3,828 June 1981 average population. See page 9 for a visual comparison and pages 12 and 13 for the actual data.

Indicative of this change in rate of total average population growth is the average monthly difference between intakes and releases. During FY 1982, the difference between intake and release was 496, while during FY 1983 this difference was 186 or a 62.5% decrease in growth. This may be an indication that some stability in local jail populations may be occurring. Pages 12 and 13 can be viewed to compare the monthly intake and release data.

Visual comparisons of the FY 1983 and FY 1982 average monthly local jail sentenced and Division of Correction sentenced inmates being housed in local jails on page 10 indicate some limited growth when comparing June of each year. When comparing actual data (pages 12 and 13) for the two fiscal years, it can be noted that the locally sentenced population increased from 1,167 in June 1982 to 1,301 in June 1983, an 11.5% increase. The Division of Correction sentenced population housed in local jails remained relatively stable over the two years (June 1983 - 110, vs. June 1982 - 91). Overall, the number of Division of Correction inmates housed in local jails has declined when comparing the FY 1983 average (110) with the FY 1982 average (136).

Total awaiting population data (page 11) indicates some growth occurred in this category early in FY 1983 but that a declining trend took over toward the end of the year. Available data (pages 12 and 13) indicate that the numbers of offenders in the awaiting population were nearly equivalent when comparing June 1983 (3,026) with June 1982 (2,995), a difference of only 31. However, the total awaiting population average for FY 1983 (3,137) was 7.1% higher than FY 1982 (2,929). The categories making up the total awaiting population have stayed proportionately the same.

PAROLE AND PROBATION STATISTICS

Data Sources

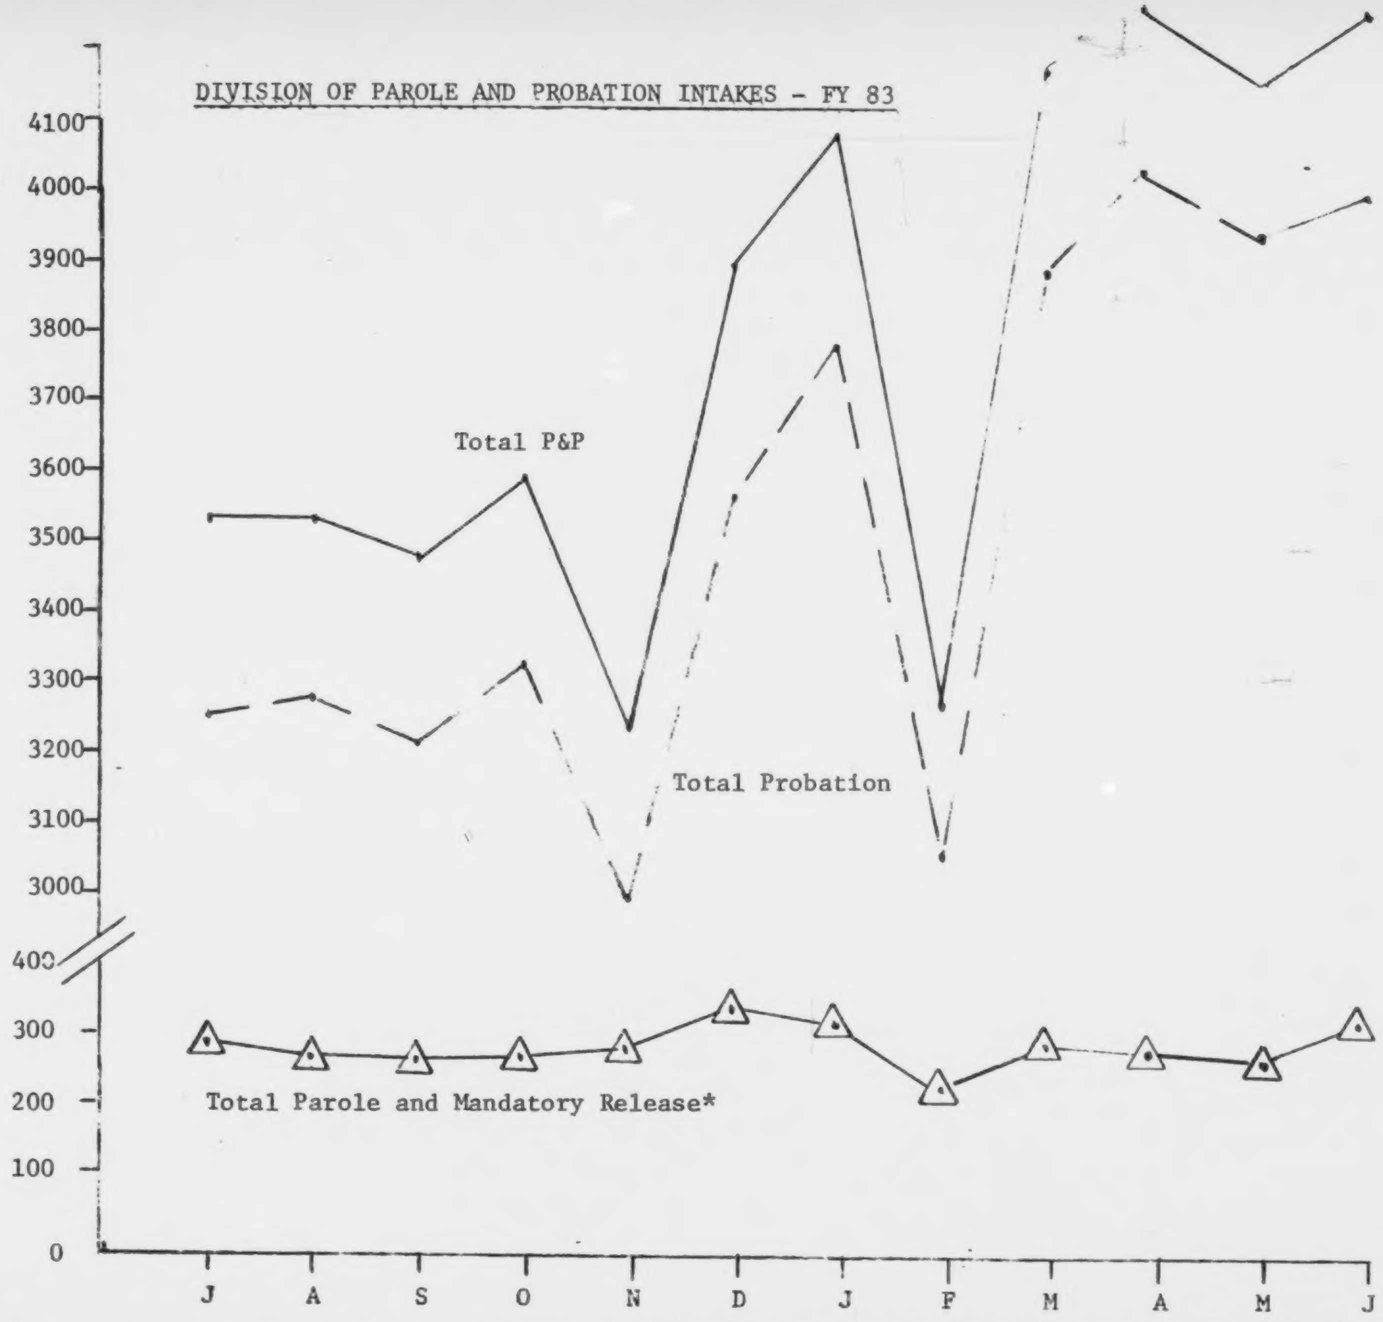
The information contained in the Division of Parole and Probation section of the Agency Processing Statistics is based upon data manually tabulated by agency staff and summarized on a state-wide basis by the Division's Headquarters personnel. The Cases Under Active Supervision (see charts at pages 22, 23, & 24 and tables at pages 30 & 31) and Cases Being Administered (see charts at pages 25, 26 & 27 and tables at pages 32 & 33) are manually compiled by all supervision agents for their individual caseloads as of the last day of each month and summarized in the Division's Monthly Workload Summary report. The Parole and Probation Intakes data pages (see charts at pages 15, 16, 19, 20 & 21 and tables at pages 28 & 29) are also manually tabulated on a monthly basis by all intake agents and supervision agents performing intake duties. Case Closings data (see charts at pages 17, 18, 19, 20, & 21 and tables at pages 28 & 29) is derived by means of a formula comparing intakes to monthly changes in the Cases Being Administered totals. Both intakes and closings are summarized on a monthly basis in the Division's Intake and Closings report.

Recent Trends

During Fiscal Year 1983, the Division's Cases under active supervision total grew from 40,172 to 47,593 cases, representing an increase at an annual rate of 18.5% or a total of 7,421 active cases. This compares to an average annual growth rate of 6.6% or approximately 2,500 cases per year during Fiscal Year 1982 (see chart at page 22 and tables at pages 30 & 31). This dramatic growth in the total active caseload has contributed to the average active caseload increasing from 89 to 110 cases per agent between the end of FY 1982 and the end of FY 1983. In addition, the total of 72,156 cases being administered by the Division at the end of FY 1983 increased by 19.0% or 11,510 cases during the year as compared to an increase of 7.4% and 4,158 cases during FY 1982 (see chart at page 25 and tables at pages 32 & 33).

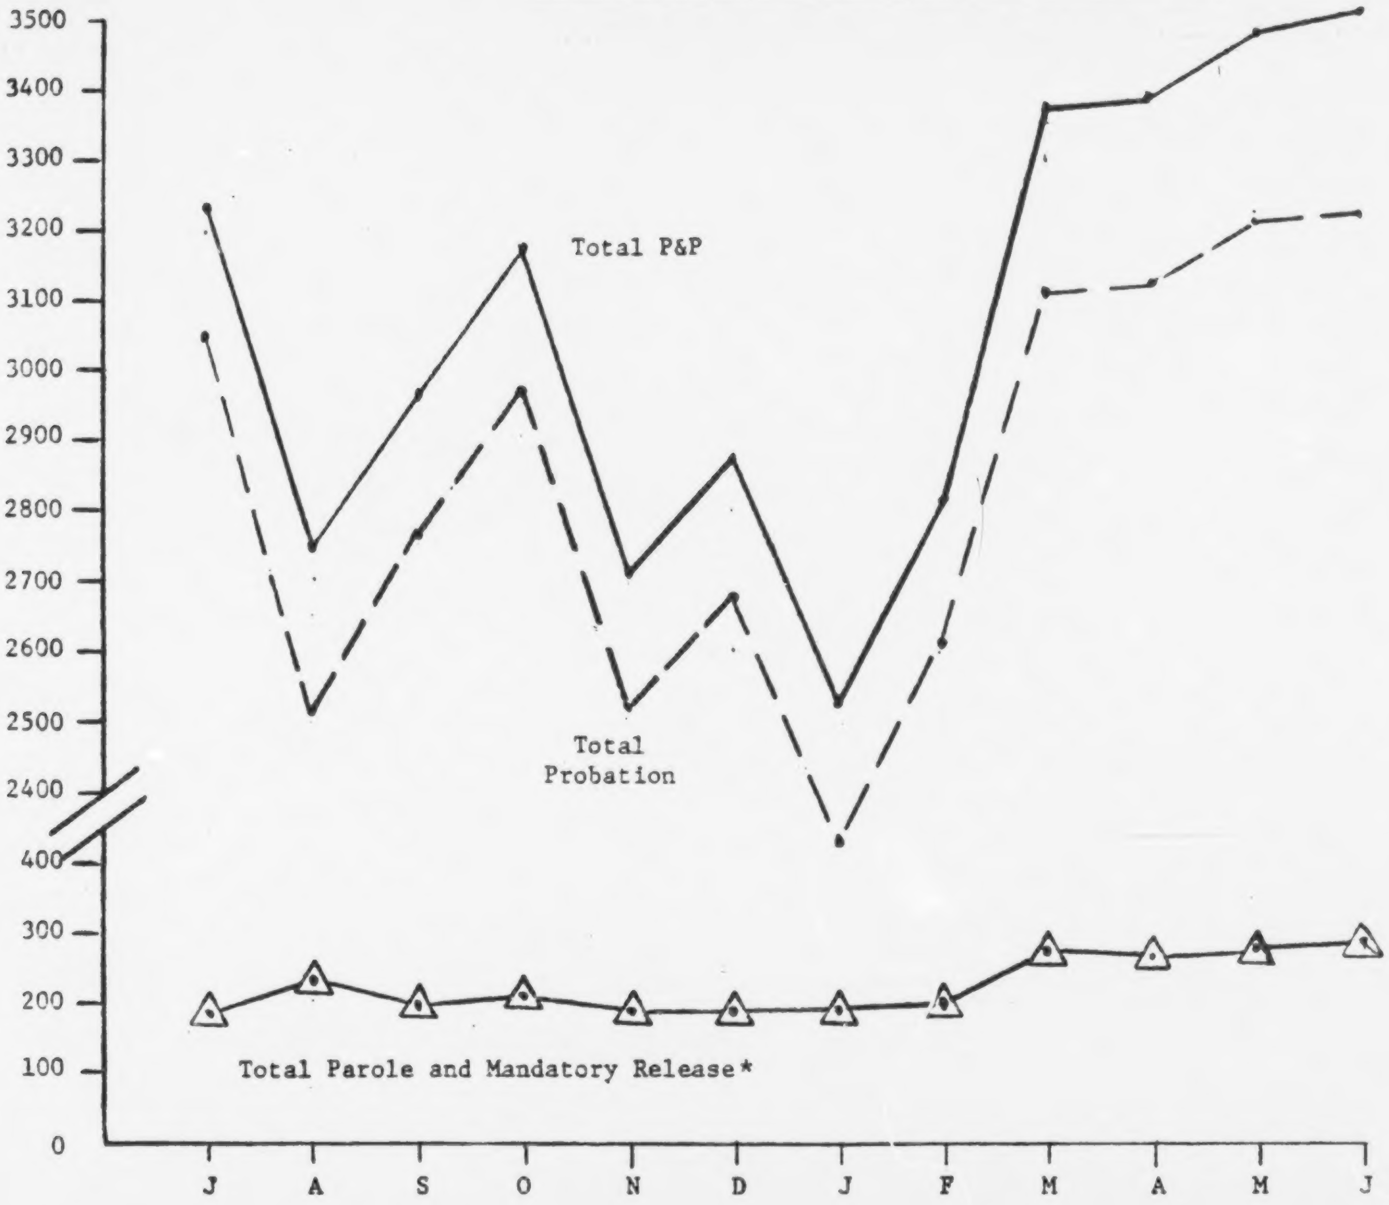
The major factor contributing to substantial increase in the cases under active supervision and total cases administered totals is the contrasting trends of intakes and closings during FY 1983. The total number of case intakes processed during FY 1983 grew at a rate of 23.7% or 8,714 cases to a total of 45,549 intakes over the FY 1982 total of 36,835 intakes (see chart at page 19 and tables 28 & 29). Total Case Closings during this period increased by only 2,314 cases or 7.3% over FY 1982 (see chart at page 19 and tables at pages 28 & 29). Although the Mandatory Release Type of Case category experienced the highest percentage intake growth increase over FY 1982 (64.1% or 545 cases), the bulk of the intake growth occurred in the District Court Probation category which increased by 28.6% or 6,853 cases and the Circuit Court Probation category which increased by 14.0% or 1,297 cases. Although the FY 1983 Parole case intake grew by 9.0% or 141 cases over FY 1982, the total parole cases being administered actually decreased by 3.9% or 177 cases since parole case closings exceeded parole intakes by 10.4%. The total cases being administered for all other types of cases increased during FY 1983 with Mandatory Release cases growing by 55.8%, Probation cases growing by 20.5%, Compact Parole and Probation cases growing by 64.2%, and Live-In cases growing by 10.4% (see tables at pages 32 and 33). Similar growth patterns occurred in the cases under active supervision totals with Mandatory Release cases increasing by 39.6%, Probation cases increasing by 20.9% and Parole cases decreasing by 10.0% (see tables at pages 30 and 31).

DIVISION OF PAROLE AND PROBATION INTAKES - FY 83



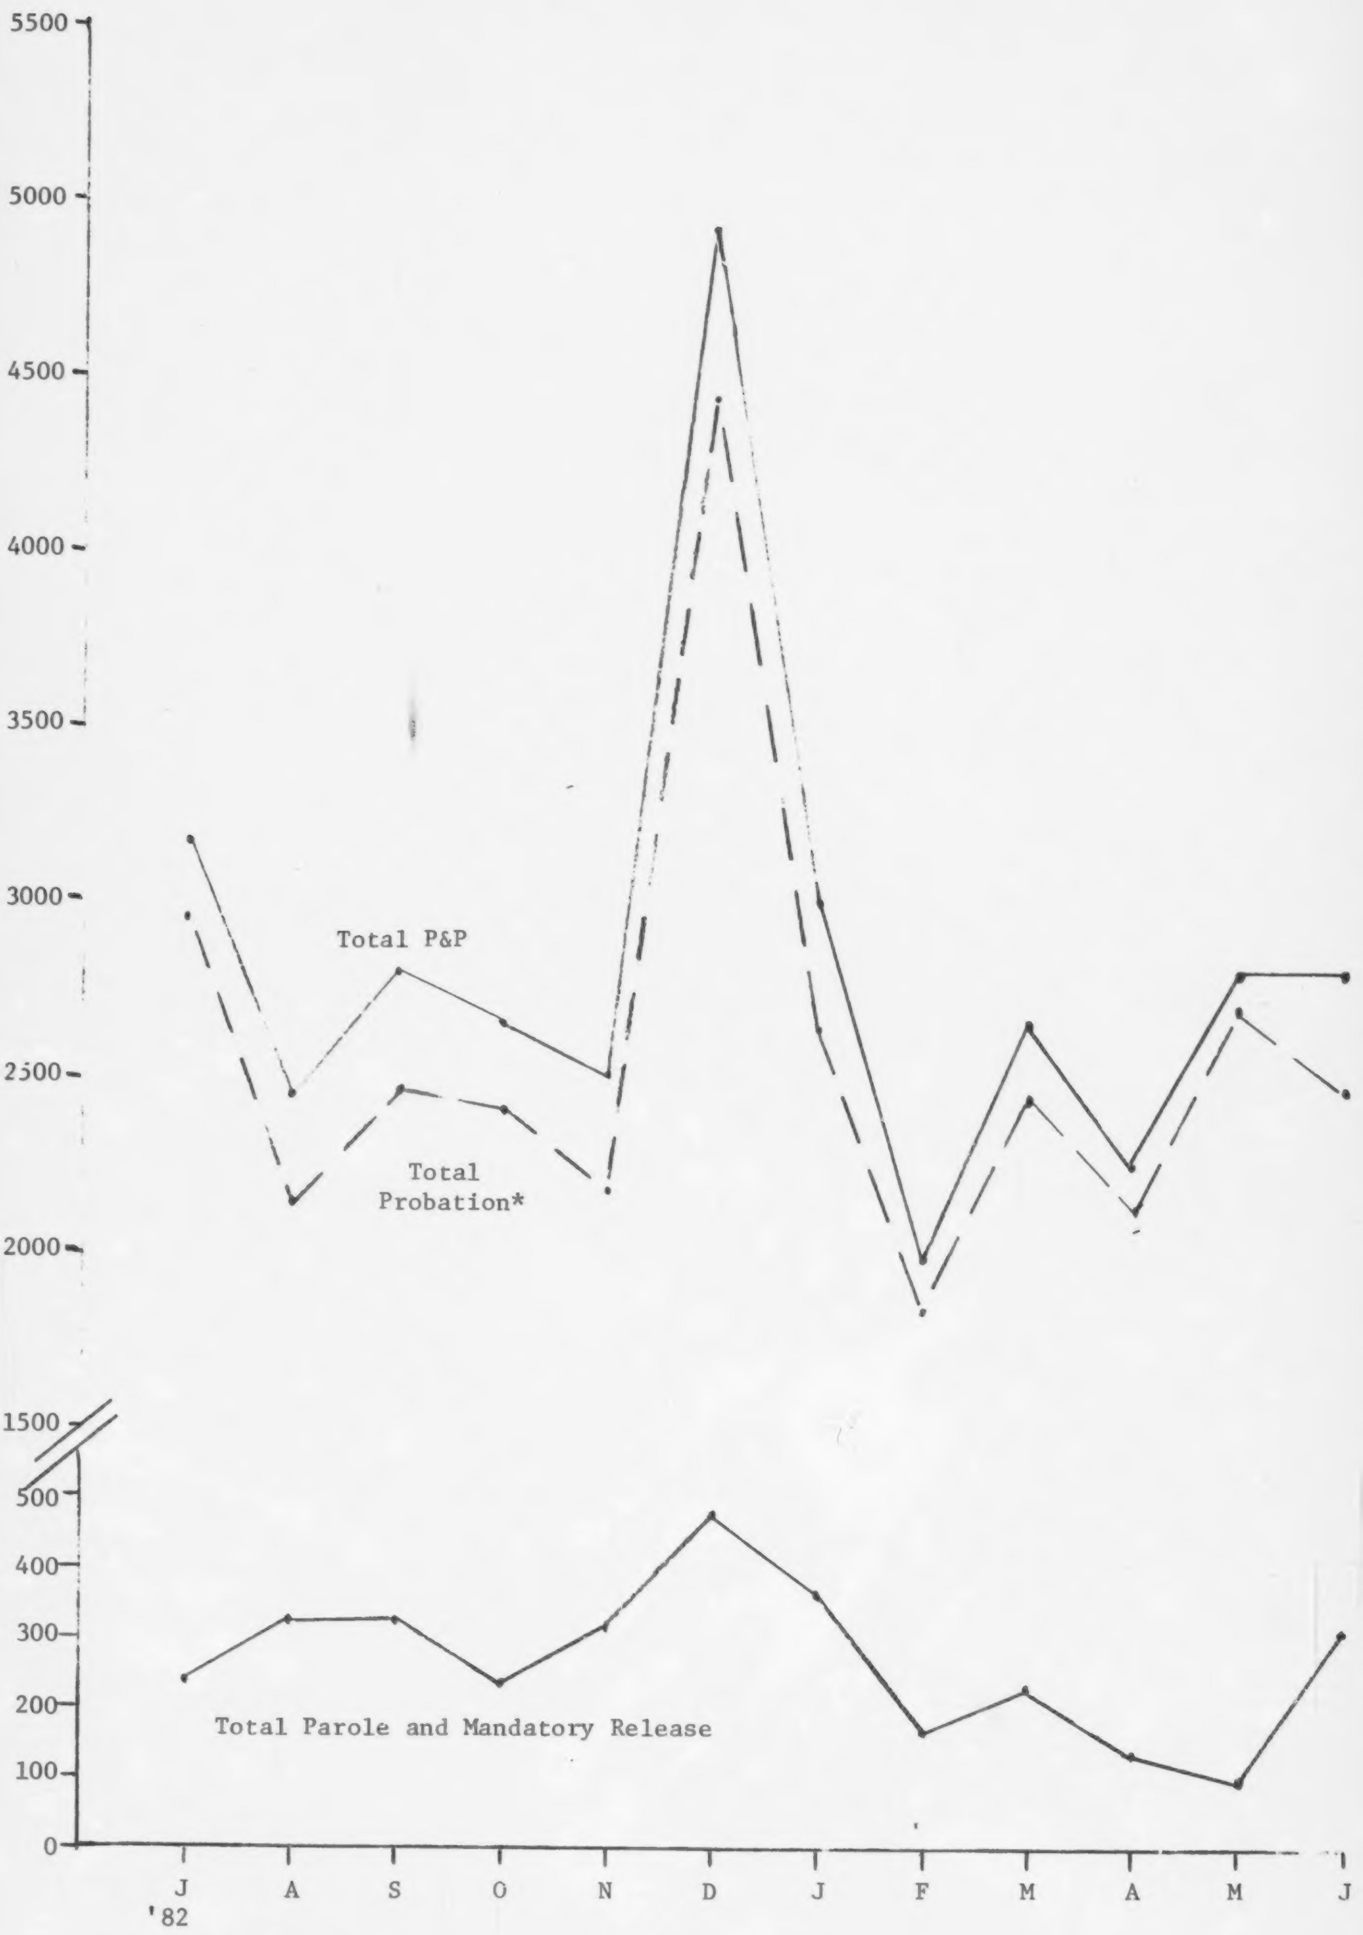
*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction. Please see the Intake and Closing Data tables following to obtain a clear indication as to this fact.

DIVISION OF PAROLE AND PROBATION INTAKES - FY 82



*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction. Please see the Intake and Closing Data tables following to obtain a clear indication as to this fact.

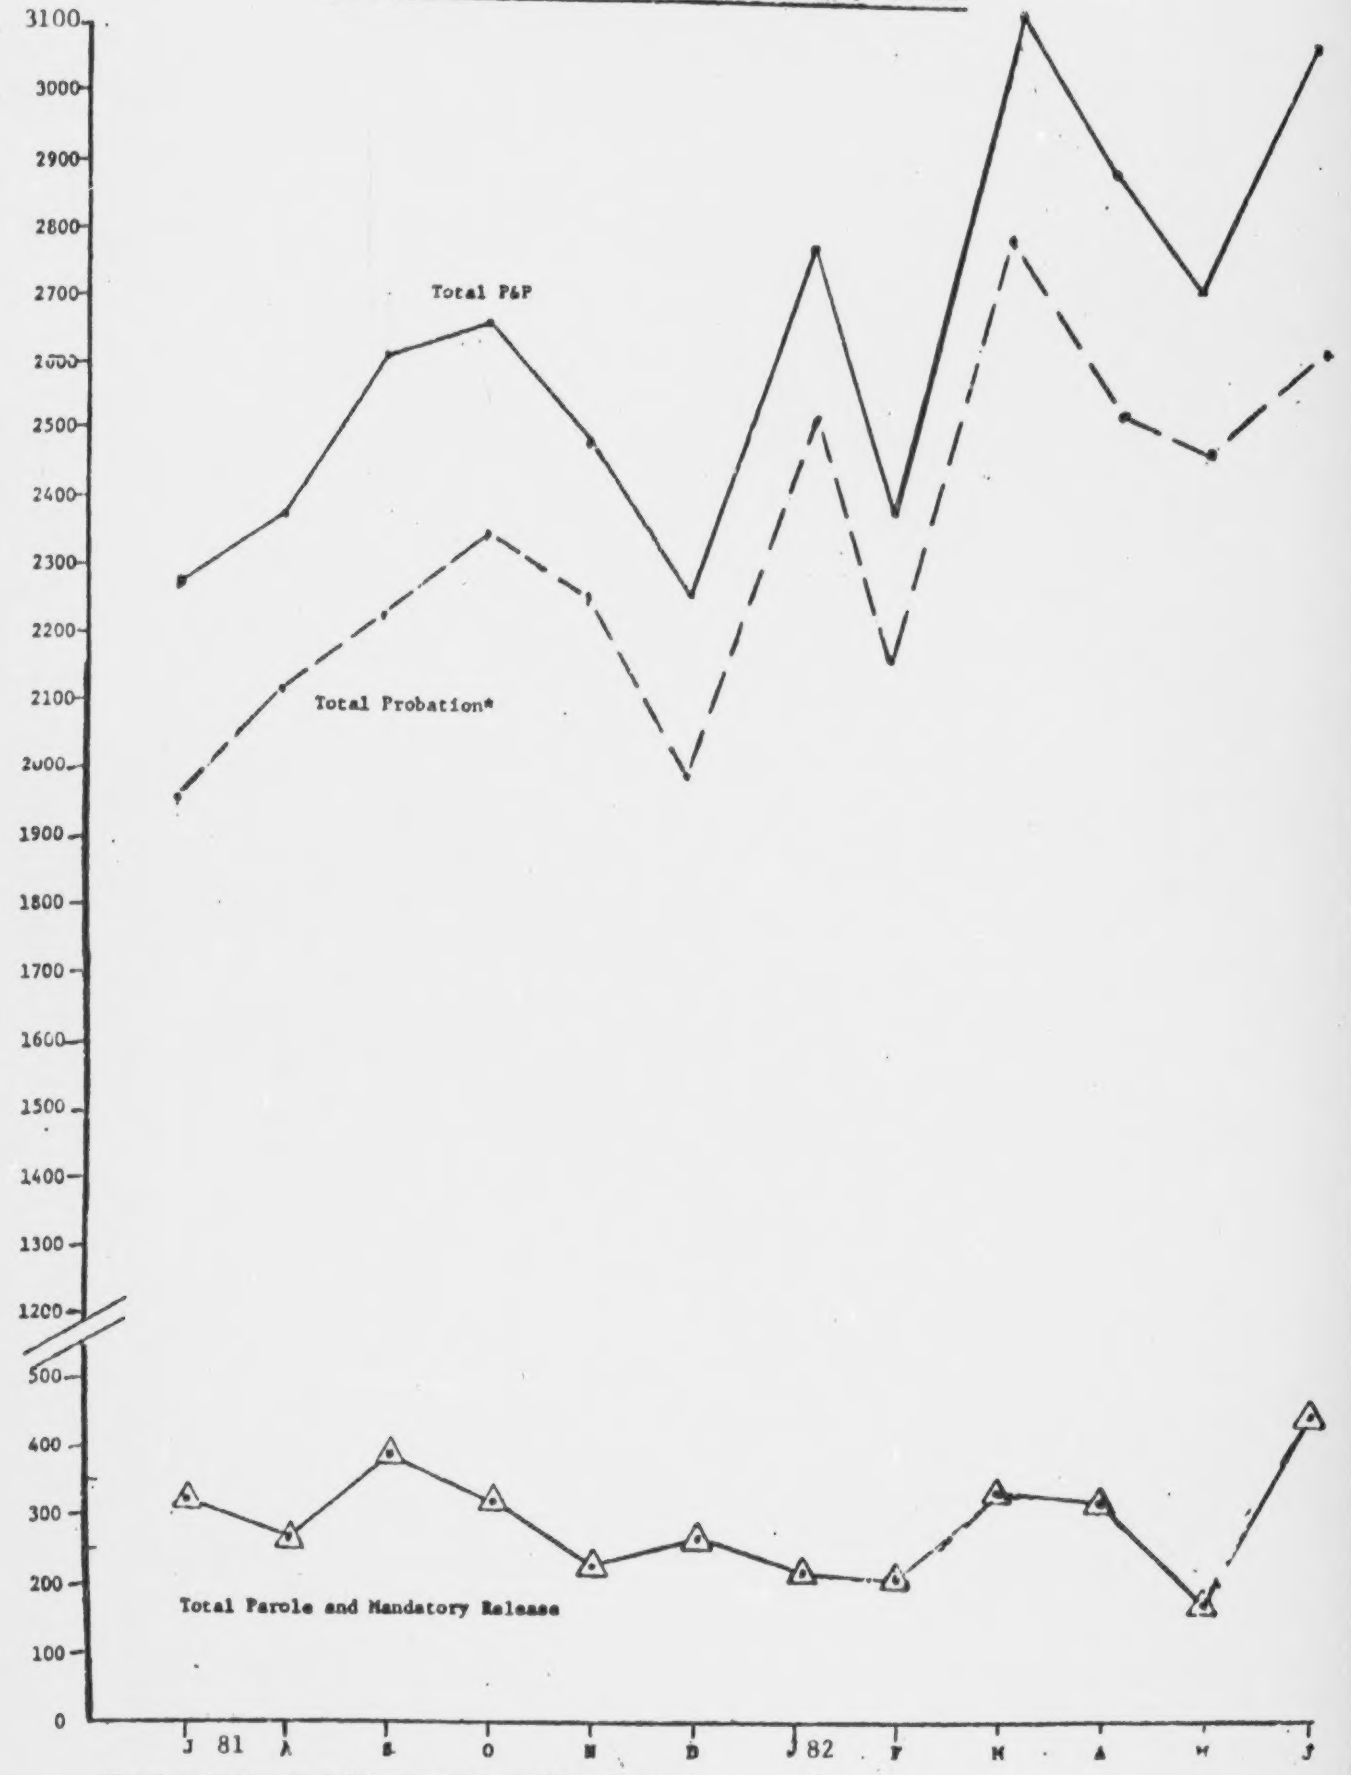
DIVISION OF PAROLE AND PROBATION CASE CLOSINGS**
FY 1983



*Total Probation includes pre-trial and live-in cases.

**In relation to December 1982 closing statistics, the Division of Parole and Probation was in the process of changing its caseload management system. In doing so, a thorough review of all existing cases was being performed. As a result a large number of cases were closed. As anticipated, case closings returned to similar trends experienced over the past year.

DIVISION OF PAROLE AND PROBATION CASE CLOSINGS — FY 1982



*Total probation includes pre-trial and live-in cases.

INTAKES AND CLOSINGS, DIVISION OF PAROLE AND PROBATION

DIVISION OF CORRECTION STATISTICS

Data Sources

The information contained in the Division of Correction section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized at the Office of Research and Statistics. The monthly average total populations (see charts at pages 35, 36 & 38 and table at page 42) are calculated from daily population sheets submitted by the Data Processing Office of the Division of Correction. The daily population sheets are manually compiled at Division Headquarters based on telephone reports from each institution. Intake and Release information (see charts at pages 35, 36, 37, 39, 40 & 41 and tables at pages 43 & 44) is compiled from monthly reports sent to the Research and Statistics Office by the individual DOC institutions. Average sentence length by jurisdiction and life and death sentence by jurisdiction information (see tables at pages 45, 46, 47 & 48) is based upon information from the male and female reception centers. This information is also received monthly and applies only to new court commitments.

The Inmate Characteristics Report (see tables at pages 49 thru 55) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that manual population data is used in the Sex Distribution table at page 49 to allow comparisons to be made between the actual population and the computerized counts for each institution. All of the remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During FY 1983, the Division's average daily total population has grown from 10,449 (July 1982) to 11,624 (June 1983), which represents an 11.2% increase over that period. It is notable that although the population is still increasing, the rate of population growth is considerably less than the 21.8% rate of growth that occurred in FY 1982 when the Division's average daily population went from 8,445 (July 1981) to 10,290 (June 1982). Population data is displayed on the charts at pages 35, 36 & 38 and the table at page 42.

The most significant factors contributing to continuing population growth are the contrasting trends of intakes and releases during FY 1983. Total intakes numbered 6,193, or 516 per month during FY 1983, while releases for the same period were 4,839 or 403 per month. Total intakes during FY 1983 are 1.7% greater than during FY 1982, while total releases have increased by 19.5%. Intake and release information is presented on data tables at pages 43 & 44 and the charts at pages 35, 36 & 37.

Of particular interest is the small increase in processed court commitments in combination with an increase in several categories of releases that has slowed the rate of population growth. Processed court commitments increased by only 1.8% from 5,140 in FY 1982 to 5,232 in FY 1983. Expiration/Mandatory releases have increased by 63.4% from 1,226 in FY 1982 to 2,003 in FY 1983. Parole releases during this same period have increased by 8.3% from 1,618 to 1,752. The large increase in Expiration/Mandatory releases has continued to alter the relationship between Parole and Expiration/Mandatory releases that has existed in past years. 2,003 or 53.3% of the 3,755 combined Parole and Expiration/Mandatory releases were by Expiration/Mandatory release in FY 1983. Expiration/Mandatory releases accounted for 43.1% of the Expiration/Mandatory-Parole combination in FY 1982 and 20.8% in FY 1981. (See data tables at pages 43 & 44 and charts at pages 39 & 40.)

Escape releases, presented on the data tables at pages 43 & 44 and the chart on page 41, have been reduced by 42.9% from 212 in FY 1982 to 121 in FY 1983. Correspondingly, the intake category of Returned from Escape decreased from 330 in FY 1982 to 187 in FY 1983, a 43.3% reduction.

The average length of sentence for new court commitments (see tables at pages 45 and 47) has remained at 62 months for admissions in FY 1983. Despite the stability of the overall length of sentence, there was considerable variation between jurisdictions. Life sentences to the Division have declined by 19.1% from 89 in FY 1982 to 72 in FY 1983. Death sentences during the same period dropped from 8 to 1.

The Inmate Characteristics of the Division's population as of the end of FY 1983 are nearly unchanged from the end of FY 1982. The average age of the Division inmates went from 28 years to 29 years. The average sentence length of the Active inmates at year end increased by only 1 month from 129 months at the end of FY 1982 to 130 at the close of FY 1983. The age, sentence, race and offense distributions have remained virtually unchanged between years.

*DOC sentenced inmates in local jails are indicated by parens and includes both males and females when applicable.

**Averages from July 1976 until June of 1978 were calculated by adding the populations on the 1st, 10th and 20th of the respective month and dividing by 3.

***Averages since June of 1978 are based on the total number of days in the respective month for which a population report is received.

*The numbers (#) listed for each jurisdiction represent the actual number of court commitments for the respective months not including life sentences and death sentences. The average lengths of sentence (avg. LOS) were calculated using the high range of the following sentence ranges: 3 months, 4-6 months, 7-12 months, 13-18 months, 19-24 months, 25-36 months, 37-60 months, 61-96 months, 97-120 months, 121-180 months, 181 months and over. The high range was used because most sentences tend to fall at the upper end of each range. 300 months was used for the 181 months and over category.

**One additional inmate committed from Baltimore City under Article 43, Sec. 98.

*The numbers (#) listed for each jurisdiction represent the actual number of court commitments for the respective months not including life sentences and death sentences. The average lengths of sentence (Avg. LOS) were calculated using the high range of the following sentence ranges: 3 months, 4-6 months, 7-12 months, 13-18 months, 19-24 months, 25-36 months, 37-60 months, 61-96 months, 97-120 months, 121-180 months, 181 months and over. The high range was used because most sentences tend to fall at the upper end of each range. 300 months was used for the 181 months and over category.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The 13-month length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is 2 months.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The 13-month length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is 2 months.

PAROLE COMMISSION (DOC RELATED) STATISTICS*

Data Sources

The information contained in the Parole Commission section of the Agency Processing Statistics is based upon data manually tabulated by Parole Commissioners and Hearing Officers and summarized monthly by Parole Commission staff from hearing docket sheets. For the purpose of this report, only those Parole Commission activities relating to Division of Correction inmates are presented and any data relating to local jail inmates is excluded.

The Parole Hearing data presented in charts at pages 57, 58, 59, 60 & 61 and the table at page 64 is based upon the decisions rendered by Parole Commission Hearing Officers and Parole Commissioners during an inmate's parole hearing. The four basic decisions that can be made are to 1) approve parole release; 2) refuse parole release; 3) reschedule the inmate for a rehearing at a later date; or 4) hold the decision in abeyance until further information is obtained to determine parole eligibility. The Parole Revocation Hearings dispositions presented in charts at pages 62 & 63 and the table at page 65 are based upon the decision rendered by Parole Commissioners when an inmate has been charged with failing to comply with the conditions of their parole release. These charges of noncompliance with the conditions of release can be divided in two broad categories: New Offenses (where a parolee has been primarily charged with committing a new crime while under parole supervision) and Technical Violations (where the parolee is charged with failing to comply with such conditions of their release as reporting to their agent, absconding from supervision, failing to attend treatment programs as directed, etc.). At the time of a revocation hearing, the Parole Commission can decide to revoke parole, continue parole supervision, hold the case for further information, or administratively close the case.

Recent Trends

During Fiscal Year 1983, the Parole Commission conducted a total of 6,226 DOC Parole Hearings which represents a 3.0% increase over Fiscal Year 1982 hearing totals (see chart at page 59 and table at page 64). The total number of hearings resulting in parole approval increased by 11.3% (from 1,280 approvals in FY 1982 to 1,424 approvals in FY 1983). A comparison of the percentage of parole approvals versus the combined totals of parole refusals and approvals during FY 1982 and FY 1983 shows a slight increase from 44.4% to 46.8%. The number of Parole Hearings Held during FY 1983 increased by 22.0% over FY 1982 totals and the number of Parole Hearings to be reheard at a later date decreased by 11.8% during FY 1983.

Parole Revocation hearings for FY 1983 totalled 986 hearings, down 10% or 110 hearings from the FY 1982 total of 1,096. Of those 195 parolees charged with Technical violations, 53.8% were continued under supervision during FY 1983 as compared to 57.8% during FY 1982. Of those 726 parolees charged with New Offense violations, 14.5% were continued under supervision during FY 1983 as compared to 21.2% during FY 1982 (see charts at pages 62 & 63 and at table at page 65). The number of parolees continued under supervision decreased by 27.3% from a total of 289 to a total of 210 while the number of parolees revoked remained relatively constant at a total of 711 in FY 1983 as compared to 710 in FY 1982. This decrease in Continued dispositions resulted in the percentage of cases revoked, as compared to total hearings held, increasing from 64.8% in FY 1982 to 72.1% in FY 1983.

*Parole Commission DOC related activity does not include the 888 parole hearings held in local jails in FY 1983 or the 1,072 parole hearings held in local jails in FY 1982.

PATUXENT INSTITUTION

Data Sources

The information contained in the Patuxent Institution section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized by the Office of Research and Statistics. The data on Average Monthly Population, Institutional Activity, Evaluation Activity, and Discharges is manually compiled monthly by the Patuxent Office of Research and Evaluation based upon internal institution reports (see tables at pages 67 and 68). The Inmates Characteristics Report (see tables at pages 49 thru 55 of the Division of Correction section of this publication) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that the manual population data is used in the Sex Distribution table, at page 49 of this publication, to allow comparisons to be made between the actual population and the computerized count for Patuxent Institution. The remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During FY 1983, the Patuxent Institution average monthly total population has grown from 607 to 609, which represents only a .3% increase over the FY 1982 average. Of the total inmates in residence, the number of inmates committed as eligible persons has increased by 2.2% from 504 in the beginning of FY 1983 to 515 at the end of the fiscal year while the number of inmates under evaluation during this period has decreased by 8.5% from 106 to 97. The total number of Patuxent inmates under parole supervision has decreased by 12.5% from 104 in the beginning of FY 1983 to 91 at the end of the fiscal year. The largest change in the Institution's inmate population has occurred among the DOC Housed Inmates category, which represents those DOC inmates that are temporarily housed at Patuxent but are not currently under evaluation for admission to Patuxent's program. The total number of DOC Housed Inmates has grown from 128 to 167 during FY 1983, which represents a 30.5% increase. (See Section I of tables at pages 67 and 68.)

The total intake to Patuxent Institution during FY 1983 has decreased by 15.6% to 249 as compared to 295 in FY 1982. Discharges during this period also experienced a reduction from a total of 284 in FY 1982 to 247 in FY 1983 or a decrease of 13.0%. Of particular note in the Discharge data is the decreases among the Escape and Parole categories. Escapes were reduced from a total of 5 in FY 1982 to none in FY 1983. During this same period, Paroles to the Halfway House decreased 46.2% from 13 to 7 and Paroles to the Community decreased 44.4% from 27 to 15. (See Section IV of the tables at pages 67 and 68.)*

The Inmate Characteristics of the Patuxent population as of the end of FY 1983 were relatively unchanged from the end of FY 1982. The primary changes were that the Average Sentence Length decreased from 286 months in FY 1982 to 278 months in FY 1983 and the Race distributions show a slight reduction in the Black inmate population percentage with a concurrent increase in the White inmate population percentage (see tables at pages 49 thru 55 of the Division of Correction section of this publication).

*It should be noted that renovations to the Halfway House during FY 1983 limited its capacity and were partially responsible for decreases in the number of paroles during this period.

CRIMINAL JUSTICE AGENCY PROCESSING STATISTICS

INTRODUCTION

IN AN EFFORT TO ASSIST DECISION MAKERS, THE OFFICE OF RESEARCH AND STATISTICS DEVELOPED THIS DOCUMENT TO PROVIDE A SYNOPSIS OF THE TRENDS IN CRIMINAL JUSTICE PROCESSING STATISTICS WHICH HAVE OCCURRED OVER THE MOST RECENT CALENDAR YEARS. AN EFFORT HAS BEEN MADE TO CAPTURE ON A MONTHLY BASIS STATISTICAL DATA WHICH PROVIDES SOME INDICATORS AS TO THE CHANGES IN OFFENSE AND ARREST PATTERNS, LOCAL JAIL POPULATIONS, PAROLE AND PROBATION CASELOADS, STATE CORRECTIONAL INSTITUTION POPULATIONS AND PAROLING AUTHORITY ACTIVITIES. IN EACH SECTION OF THE REPORT A BRIEF DESCRIPTION OF THE DATA SOURCES AND RECENT TRENDS IS PRESENTED. THIS REPORT ACTS AS A 'SNAPSHOT' OF THE EVENTS WHICH HAVE OCCURRED OVER THE PAST TWO CALENDAR YEARS. CAUSE-EFFECT RELATIONSHIPS CANNOT BE DRAWN FROM THE VARIOUS DATA PRESENTED. HOWEVER, RELATIONSHIPS IN TRENDS CAN AID USERS OF THIS DOCUMENT IN OBTAINING A PICTURE OF POSSIBLE FUTURE TRENDS.

OFFENSES AND ARRESTS

Data Sources

The information contained in the offenses and arrests section of the Agency Processing Statistics is based upon data tabulated through the State-wide Uniform Crime Reporting program managed by the Maryland State Police Criminal Records Central Repository (CRCR). Each month summary data on offenses and arrests is compiled and submitted to CRCR by each of Maryland's 134 law enforcement agencies. These reports are then edited and prepared for data entry. Computer generated output reports are then produced to summarize the information received in a variety of formats. CRCR then provides monthly summaries of the offense and arrest data to the Office of Research and Statistics.

Comparisons of data trends occurring between CY 1983 and CY 1982 have been graphically depicted in charts. Due to the time taken to submit and compile this data, only 9 months of Calendar Year 1983 is available at this time. Index Offenses - Total, Property and Violent are displayed (page 3) as well as a comparison of Total Offenses (reported) and Adult Arrests (page 4). Data associated with these graphs is provided in tables for each calendar year (pages 5 and 6). A quarterly comparison of the change in reported index offenses over these two calendar years is also provided (page 7).

Recent Trends

Total offenses were down 10.1% from 191,097 in 9 months of CY 1982 to 171,702 in the first 9 months of CY 1983. This decreasing trend occurred in each index crime category with the exception of Robbery which increased very slightly from 10,774 in 9 months of CY 1982 to 10,789 in 9 months of CY 1983, a 0.1% increase. Combined categories of offense data shows that violent offenses (murder, rape, robbery and aggravated assault) decreased 3.1% from 26,622 in 9 months of CY 1982 to 25,802 for 9 months of CY 1983. Property Offenses (burglary, larceny and motor vehicle theft) decreased 11.3% from 164,475 in 9 months of 1982 to 145,900 in 9 months of 1983. See page 3 for a visual comparison and pages 5, 6 and 7 for the actual data.

Adult arrests (those individuals 18 and over) increased 0.7% from 128,368 in 9 months of CY 1982 to 129,311 in 9 months of CY 1983. This growth, though slowing, is a continuing trend in that the number of adult arrests for 9 months of CY 1981 was 112,698. The chart on page 4 depicts the monthly adult arrest trend based on the data in the tables on pages 5 and 6. It should be noted that the offense data is collected for only index crimes (murder, rape, robbery, aggravated assault, burglary, larceny and motor vehicle theft) and only when they are reported. Arrest data encompasses not only index crimes but other crimes. These other crimes are generally considered less serious and include such offenses as simple assault, possession or sale of drugs, sex offenses other than rape, weapons possession, fraud, vandalism, etc. These two sets of data (offenses and arrests) are mutually exclusive and difficult to compare to each other. Therefore, no direct relationship between these two divergent trends can be drawn.

Data on juvenile arrests (those individuals 17 years old or younger), see tables on pages 5 and 6, shows a declining trend. The number of juveniles arrested in 9 months of CY 1983 was 29,667, a 10.8% decrease from the 33,246 juveniles arrested in 9 months of CY 1982. The number of juvenile arrests for 9 months of CY 1981 was 36,944 indicating this decrease to be a continuing trend.

LOCAL JAIL STATISTICS

Data Sources

The information contained in the Local Jail Section of the Agency Processing Statistics is based upon manual data submitted by local jurisdictions to the Maryland Commission on Correctional Standards. Staff of that agency tabulate and summarize the submitted data on a statewide basis. The total Average Daily Population in Local Jails (page 9), Local versus Division of Correction inmates in local jails (page 10) and the Awaiting Trial, Pre-Sentenced and Other [jail population] (page 11) provide graphic comparisons of the changes in these populations over the past two calendar years (1983 and 1982). Data used for developing these charts is displayed in the tables at pages 12 and 13.

Recent Trends

The average population in local jails decreased 3.6% when comparing December 1983 (4,292) with December 1982 (4,450). This decline is markedly different from the 9.0% increase experienced 12 months earlier, i.e. 4,450 in December 1982 compared to 4,084 in December 1981. However, there was an overall 4.2% increase in the average number of individuals in local jails when comparing the 12-month averages for CY 1983 (4,577) with that of CY 1982 (4,394). See page 9 for a visual comparison and pages 12 and 13 for the actual data.

The decline in the average population toward the end of CY 1983 is a result of the sharp decrease in intakes in November and December 1983, thus, there were 173 more departures in comparison to intakes for CY 1983, while in 1982 there were 388 more intakes in comparison to departures. Pages 12 and 13 can be viewed to compare the monthly variations in intake and release data.

Visual comparisons of the CY 1983 and CY 1982 average monthly local jail sentenced and Division of Correction sentenced inmates being housed in local jails on page 10 shows a mixed pattern. When comparing actual data (pages 12 and 13) the local sentenced monthly average grew 7.0% (1,310 in CY 1983 vs. 1,224) in CY 1982. The Division of Correction sentenced population housed in local jails monthly average has stayed practically the same (111 in CY 1983 vs. 112 in CY 1982).

Total awaiting population data (page 11) shows a fluctuation in comparing CY 1983 and CY 1982 but overall there has been a downward trend (from 3,254 in January of 1983 to 2,687 in December of 1983). However, the difference in monthly averages indicates CY 1983 (3,132) increased 4.5% in comparison to CY 1982 (2,996). (See data on pages 12 and 13.)

PAROLE AND PROBATION STATISTICS

Data Sources

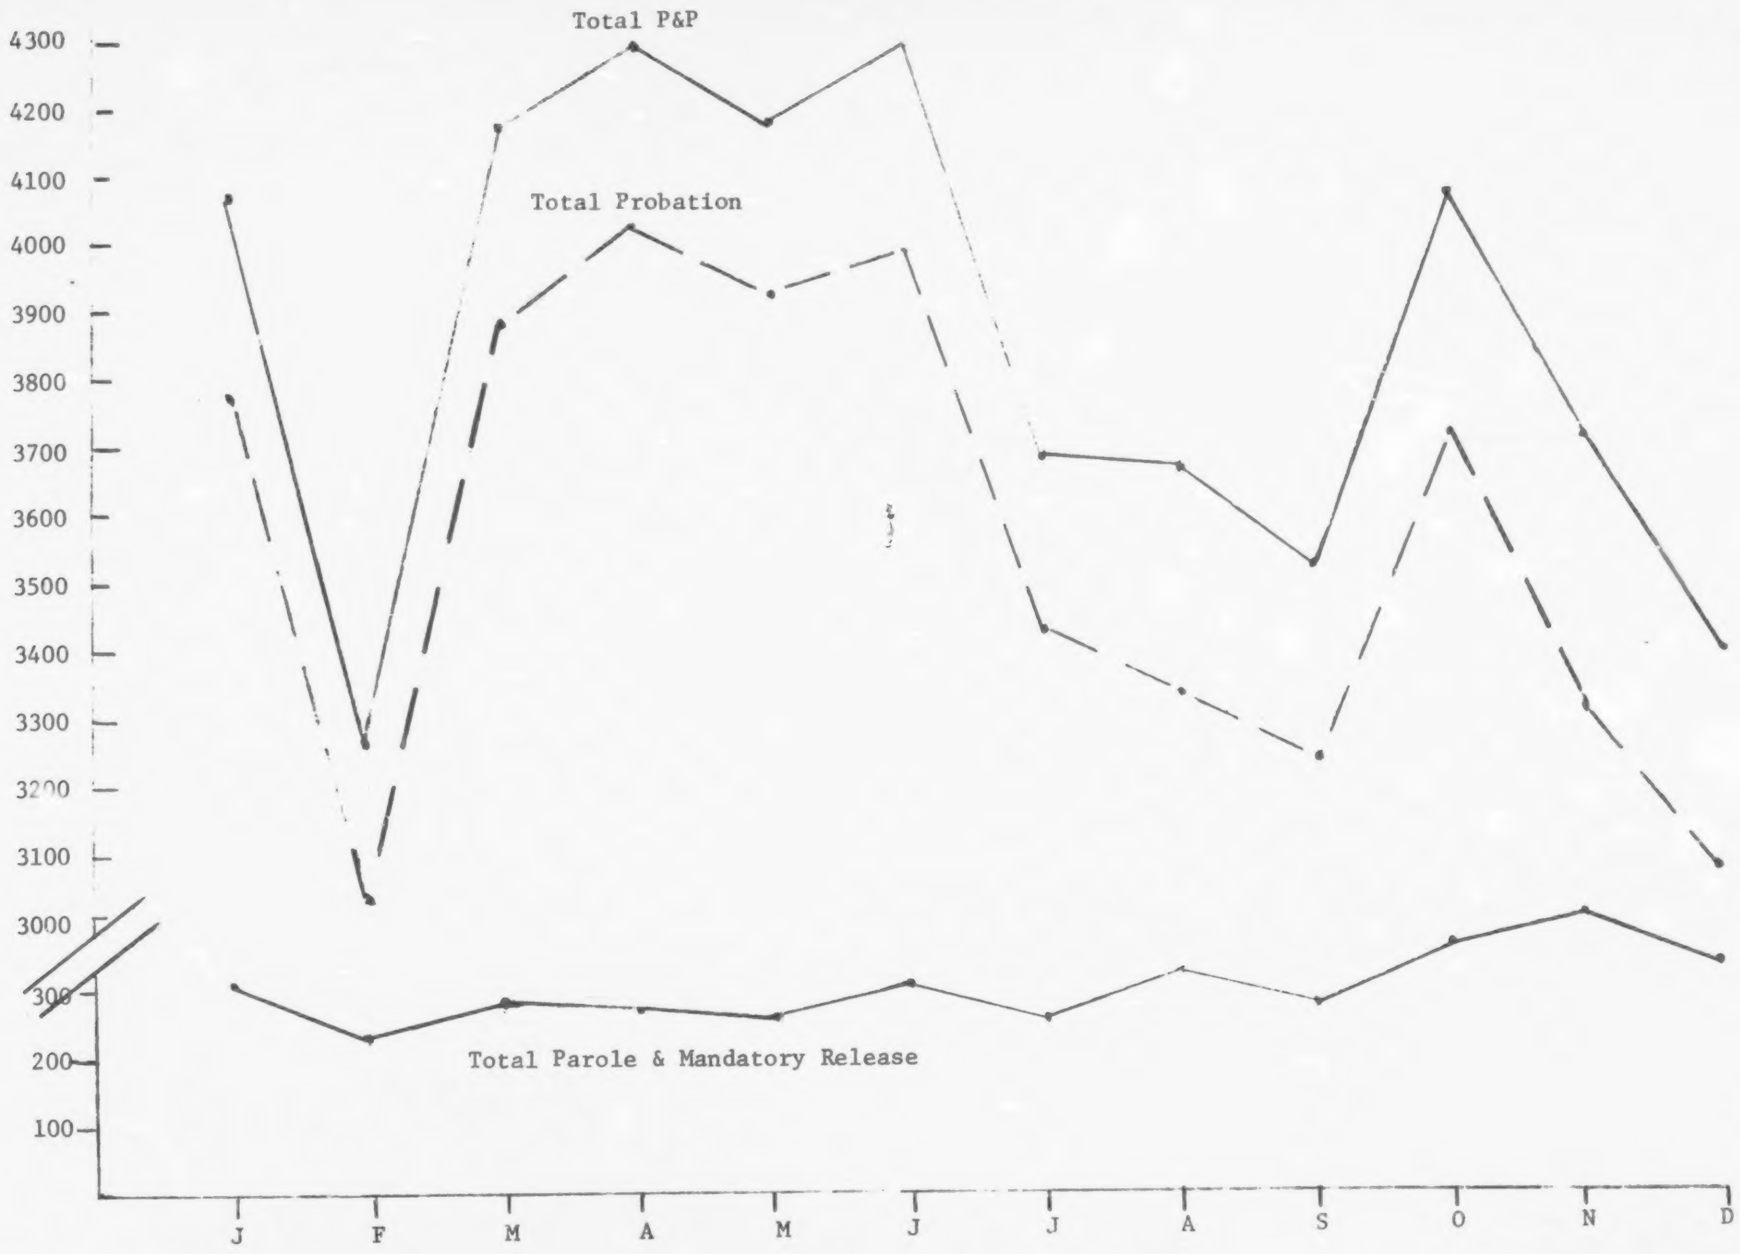
The information contained in the Division of Parole and Probation section of the Agency Processing Statistics is based upon data manually tabulated by agency staff and summarized on a state-wide basis by the Division's Headquarters personnel. The Cases Under Active Supervision (see charts at pages 22, 23, & 24 and tables at pages 30 & 31) and Cases Being Administered (see charts at pages 25, 26 & 27 and tables at pages 32 & 33) are manually compiled by all supervision agents for their individual caseloads as of the last day of each month and summarized in the Division's Monthly Workload Summary Report. The Parole and Probation Intakes data pages (see charts at pages 15, 16, 19, 20 & 21 and tables at pages 28 & 29) are also manually tabulated on a monthly basis by all intake agents and supervision agents performing intake duties. Case Closings data (see charts at pages 17, 18, 19, 20 & 21 and tables at pages 28 & 29) is derived by means of a formula comparing intakes to monthly changes in the Cases Being Administered totals. Both intakes and closings are summarized on a monthly basis in the Division's Intake and Closings report.

Recent Trends

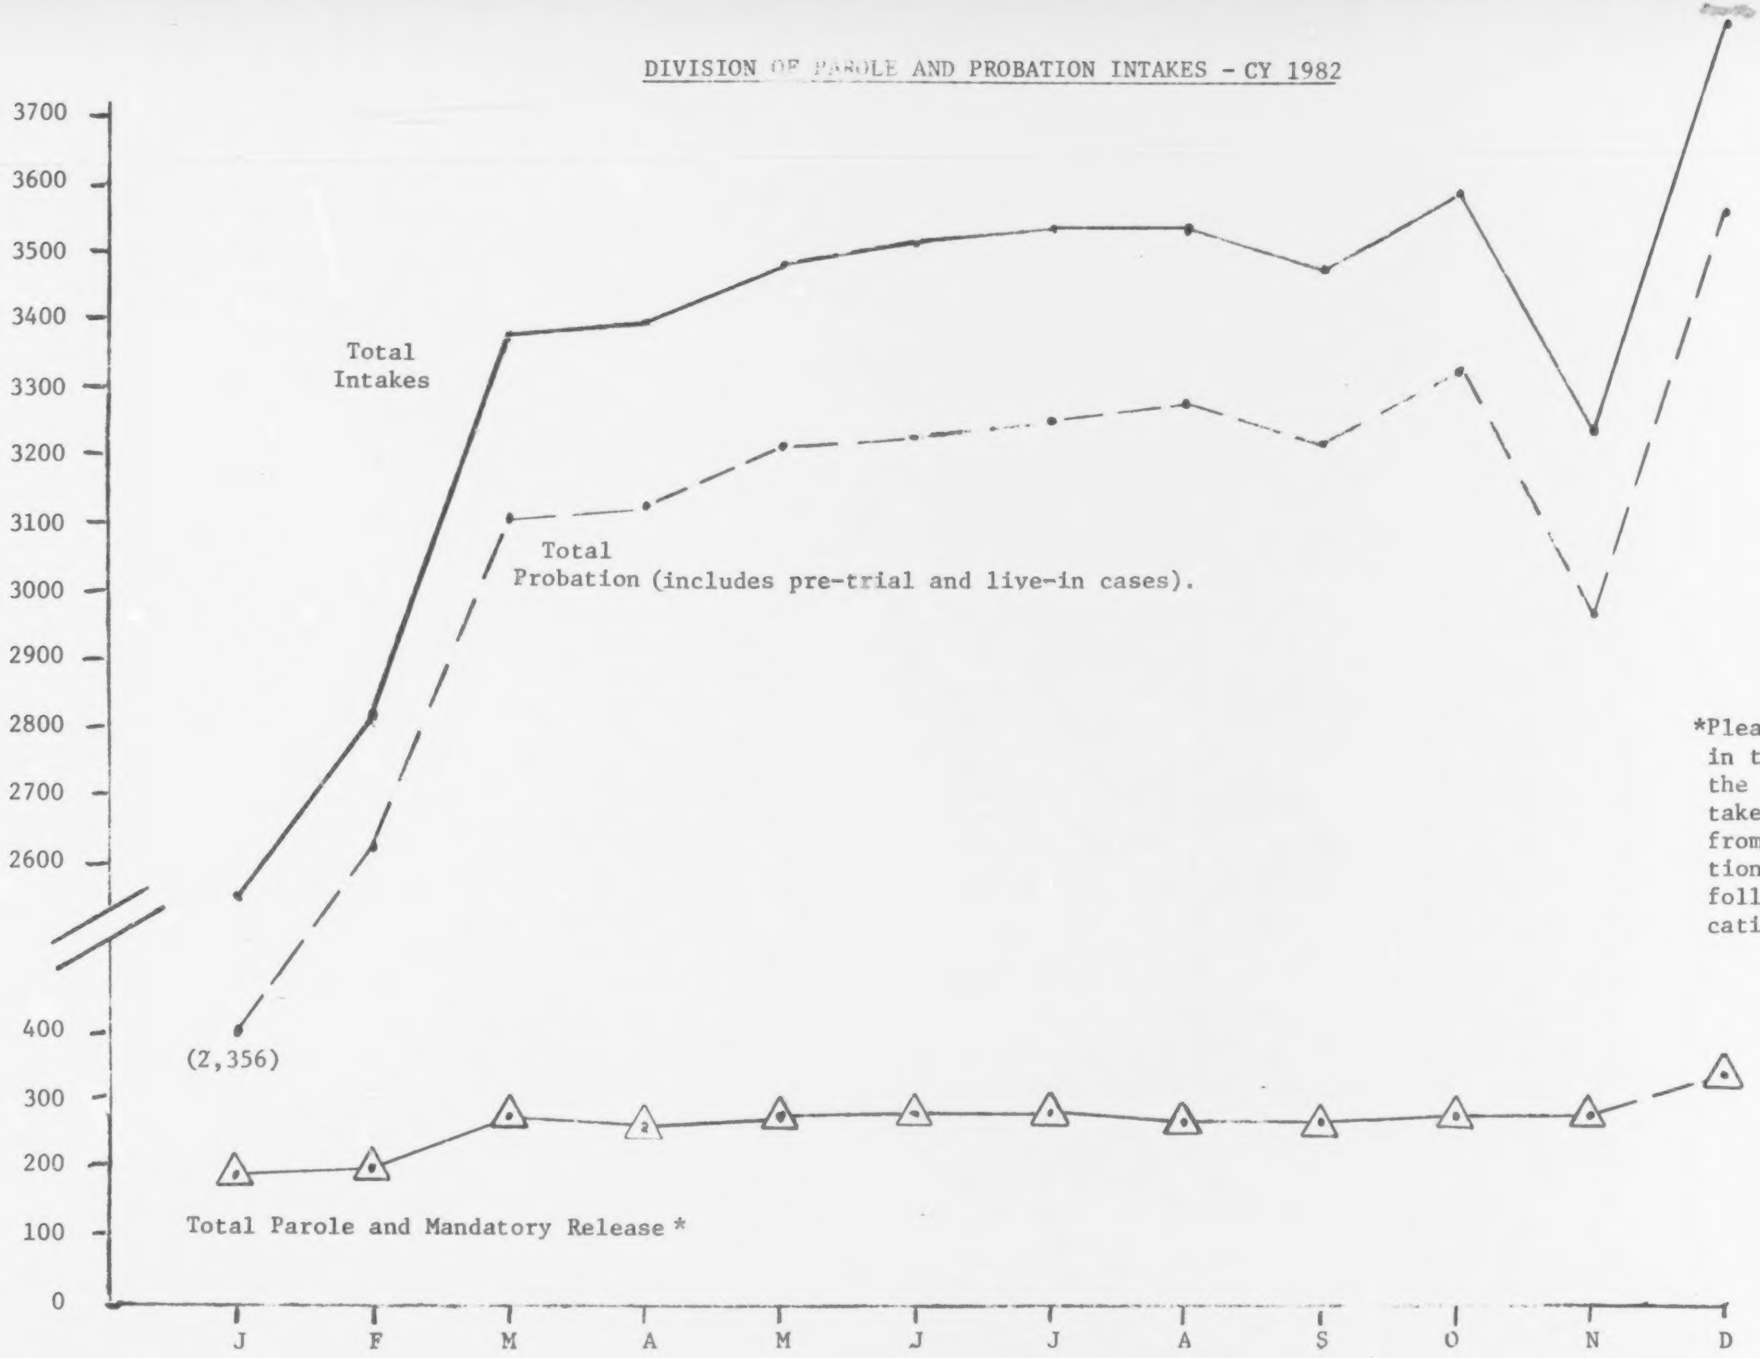
During Calendar Year 1983, the Division's Cases Under Active Supervision total grew from 41,768 to 48,730 cases, representing an increase at an annual rate of 16.7% or a total of 6,962 active cases. This compares to an average annual growth rate of 8.6% or approximately 3,300 cases per year during Calendar Year 1982 (see chart at page 22 and tables at pages 30 & 31). This dramatic growth in the total active caseload has contributed to the average active caseload increasing from 93 to 108 cases per agent between the end of CY 1982 and the end of CY 1983. In addition, the total of 74,932 cases being administered by the Division at the end of CY 1983 increased by 18.2% or 11,511 cases during the year as compared to an increase of 8.5% and 4,943 cases during CY 1982 (see chart at page 25 and tables at pages 32 & 33).

The major factor contributing to substantial increase in the Cases Under Active Supervision and total cases administered totals is the contrasting trends of intakes and closings during CY 1983. The total number of case intakes processed during CY 1983 grew at a rate of 14.8% or 5,981 cases to a total of 46,376 intakes over the CY 1982 total of 40,395 intakes (see chart at page 19 and tables 28 & 29). Total Case Closings during this period decreased by 538 cases or 1.5% over CY 1982 (see chart at page 19 and tables at pages 28 & 29). Although the Mandatory Release Type of Case category experienced the highest percentage intake growth increase over CY 1982 (52.5% or 605 cases), the bulk of the intake growth occurred in the District Court Probation category which increased by 13.2% or 3,567 cases and the Circuit Court Probation category which increased by 20.0% or 1,853 cases. Although the CY 1983 parole case intake decreased by 5.2% or 90 cases over CY 1982, the total parole cases being administered actually increased by 5.3% or 224 cases since parole case intakes exceeded parole closings by 15.8%. The total cases being administered for most other types of cases increased during CY 1983 with Mandatory Release cases growing by 37.4%, Probation cases growing by 19.1%, Compact Parole and Probation cases growing by 13.8%, and Live-In cases decreasing by 1.9% (see tables at pages 32 and 33). Similar growth patterns occurred in the cases under active supervision totals with Mandatory Release cases increasing by 37.8%, Probation cases increasing by 18.0% and Parole cases decreasing by 1.0% (see tables at pages 30 and 31).

DIVISION OF PAROLE AND PROBATION INTAKES - CY 1983



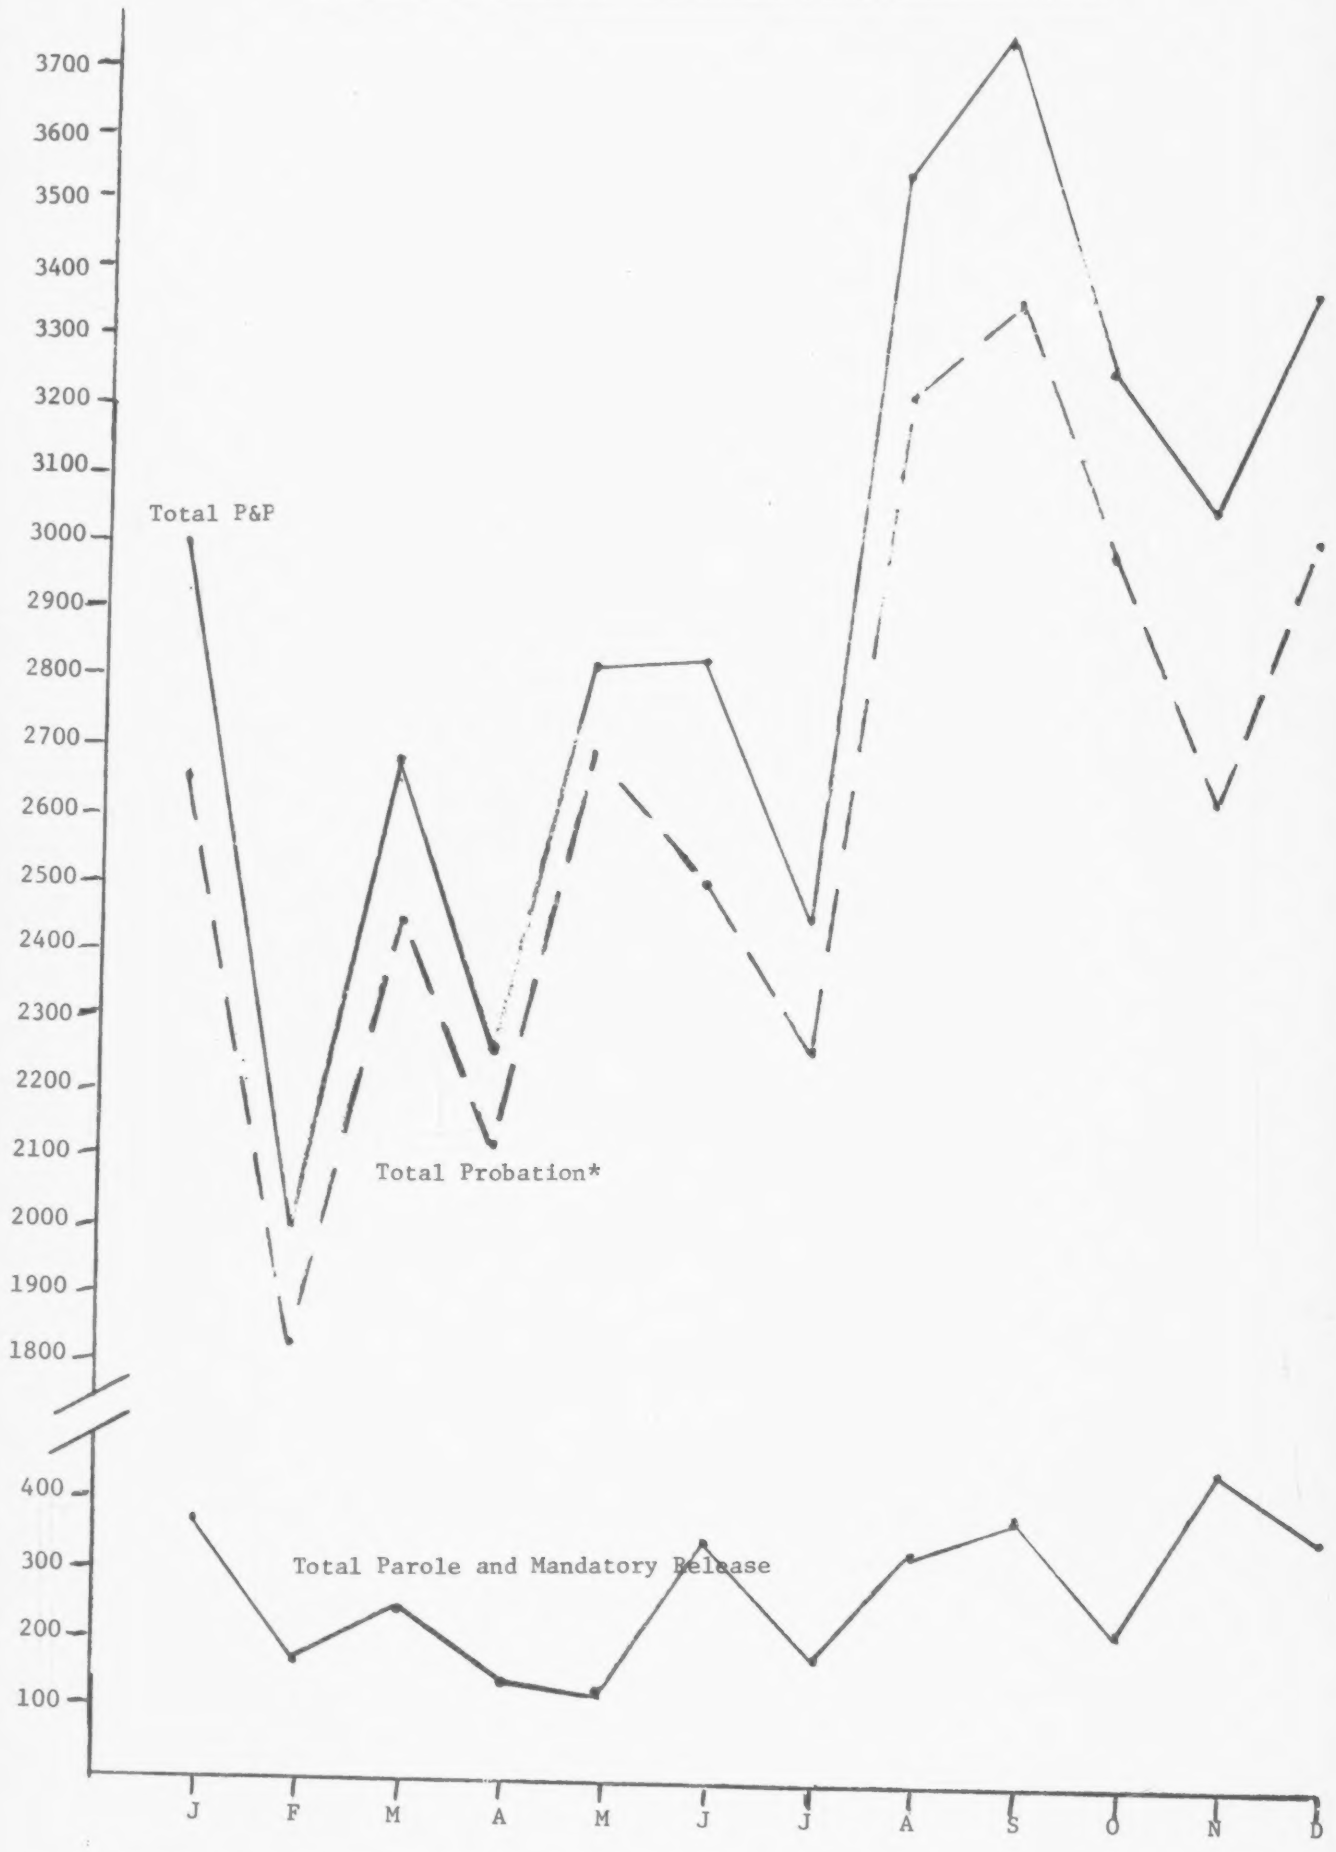
DIVISION OF PAROLE AND PROBATION INTAKES - CY 1982



*Please note that the growth in this category is primarily the result of additional intake from mandatory releases from the Division of Correction. The data tables that follow present a clear indication as to this fact.

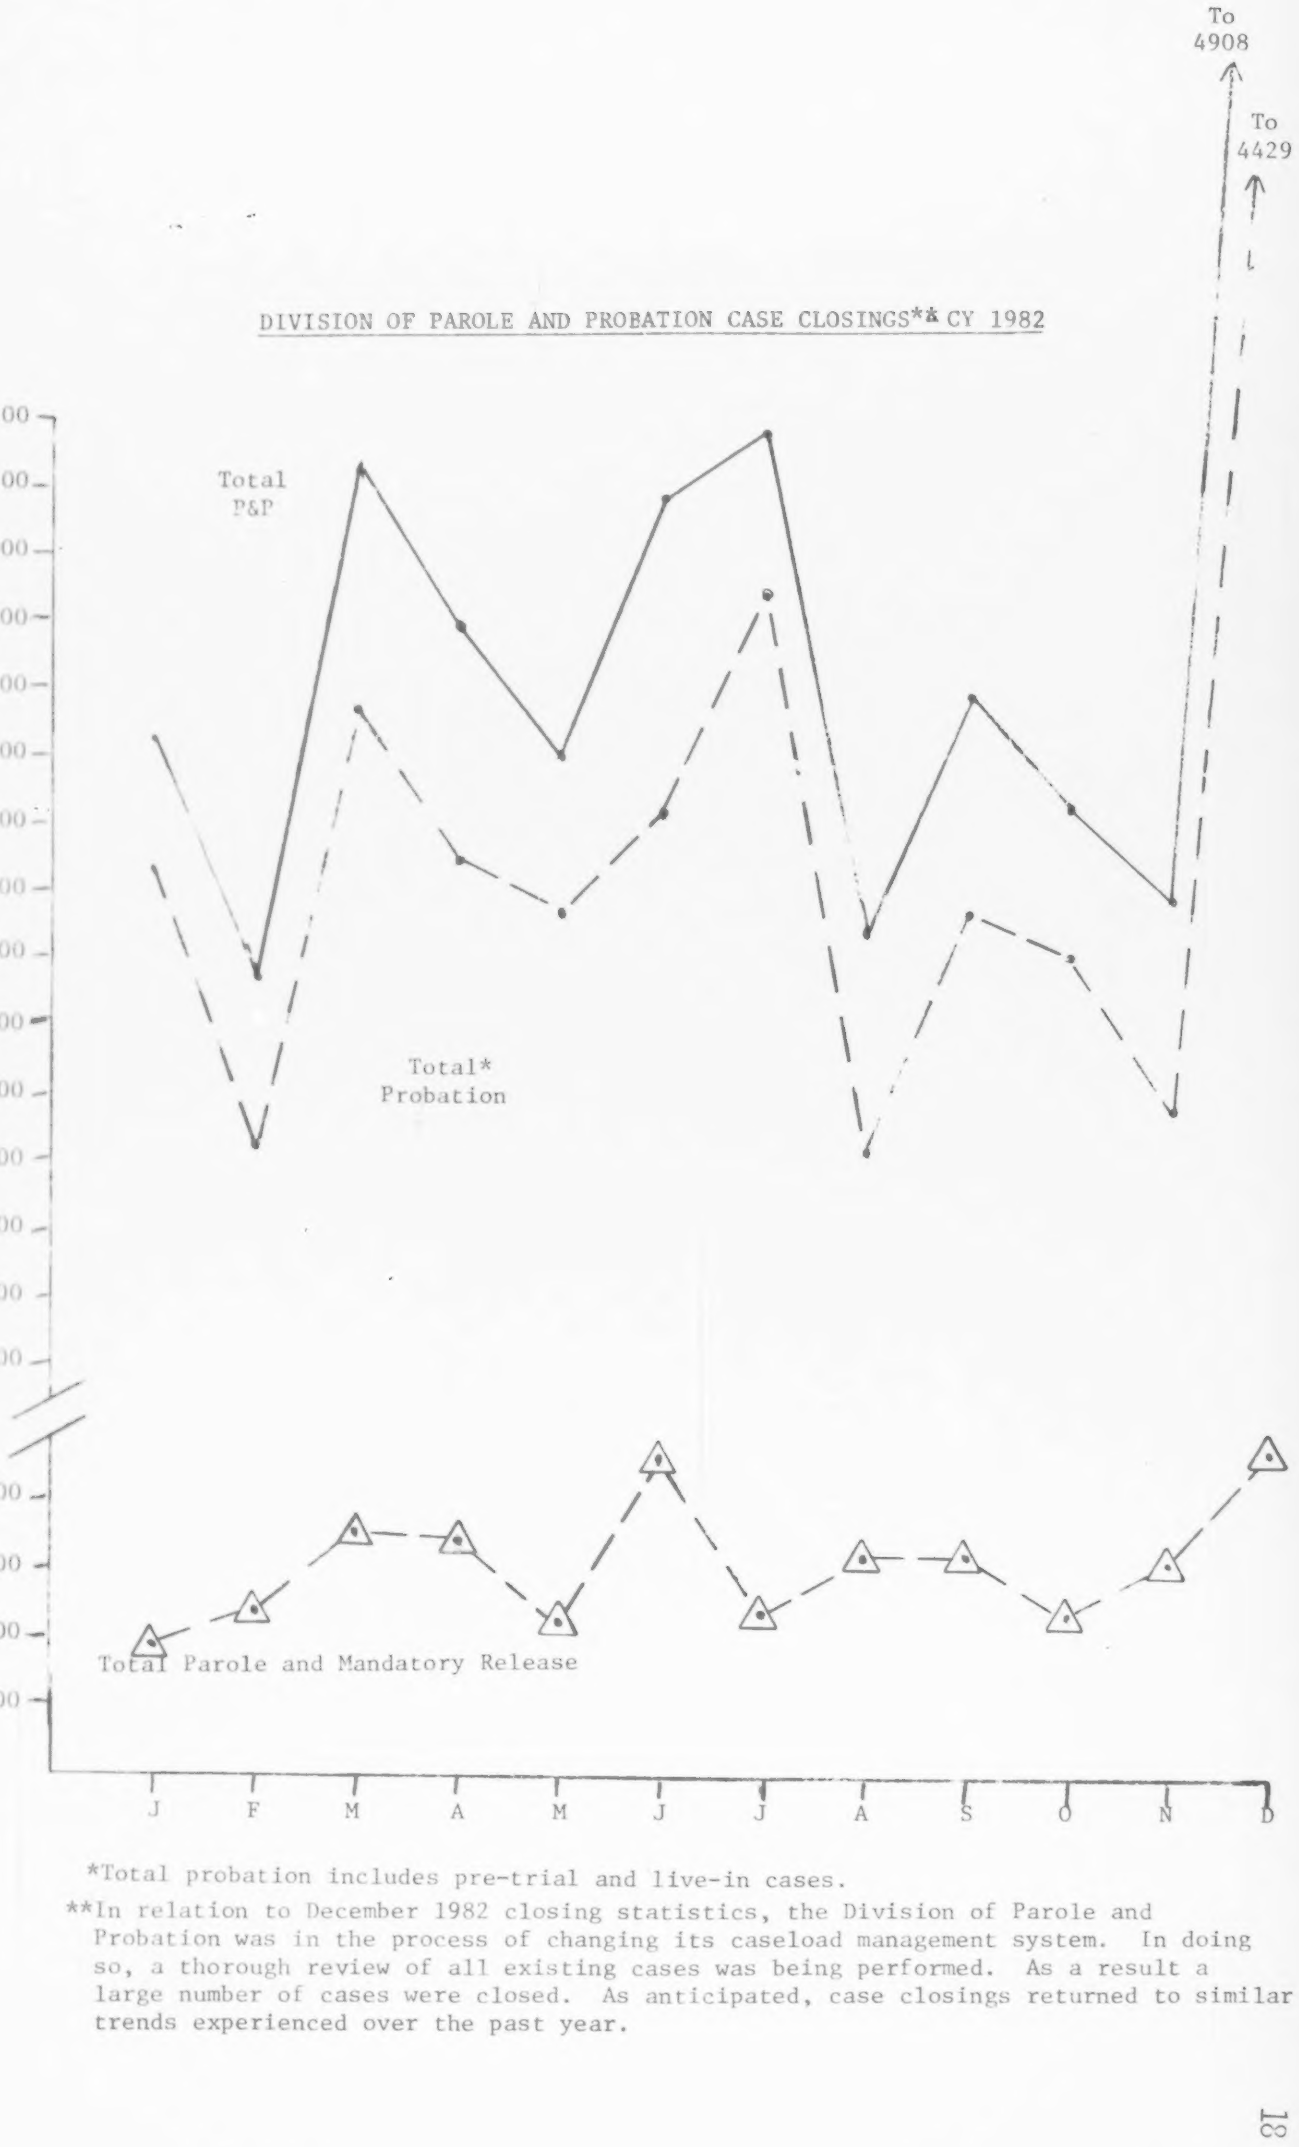
RJM 1/19/83

DIVISION OF PAROLE AND PROBATION CASE CLOSINGS - CY 1983



*Total probation includes pre-trial and live-in cases.

DIVISION OF PAROLE AND PROBATION CASE CLOSINGS** CY 1982



*Total probation includes pre-trial and live-in cases.

**In relation to December 1982 closing statistics, the Division of Parole and Probation was in the process of changing its caseload management system. In doing so, a thorough review of all existing cases was being performed. As a result a large number of cases were closed. As anticipated, case closings returned to similar trends experienced over the past year.

DIVISION OF CORRECTION STATISTICS

Data Sources

The information contained in the Division of Correction section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized at the Office of Research and Statistics. The monthly average total populations (see charts at pages 35, 36 & 38 and table at page 42) are calculated from daily population sheets submitted by the Data Processing Office of the Division of Correction. The daily population sheets are manually compiled at Division Headquarters based on telephone reports from each institution. Intake and Release information (see charts at pages 35, 36, 37, 39, 40 & 41 and tables at pages 43 & 44) is compiled from monthly reports sent to the Research and Statistics Office by the individual DOC institutions. Average sentence length by jurisdiction and life and death sentence by jurisdiction information (see tables at pages 45, 46, 47 & 48) is based upon information from the male and female reception centers. This information is also received monthly and applied only to new court commitments.

The Inmate Characteristics Report (see tables at pages 49 thru 55) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that manual population data is used in the Sex Distribution table at page 49 to allow comparisons to be made between the actual population and the computerized counts for each institution. All of the remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During CY 1983, the Division's average daily total population has grown from 11,037 (January 1983) to 12,024 (December 1983), which represents an 8.9% increase over that period. It is notable that although the population is still increasing, the rate of population growth is considerably less than the 16.7% rate of growth that occurred in CY 1982 when the Division's average daily population went from 9,415 (January 1982) to 10,990 (December 1982). Population data is displayed on the charts at pages 35, 36 & 38 and the table at page 42.

The most significant factors contributing to continuing population growth are the contrasting trends of intakes and releases during CY 1983. Total intakes numbered 6,140 or 512 per month during CY 1983, while releases for the same period were 5,008 or 417 per month. Total intakes during CY 1983 are 2.3% lower than during CY 1982, while total releases have increased by 9.7%. Intake and release information is presented on data tables at pages 43 & 44 and the charts at pages 35, 36 & 37.

Of particular interest is the small decrease in processed court commitments in combination with the overall increase in releases that has slowed the rate of population growth. Processed court commitments decreased by 0.5% from 5,273 in CY 1982 to 5,248 in CY 1983. Expiration/Mandatory releases have increased by 36.1% from 1,687 in CY 1982 to 2,296 in CY 1983. Parole releases during this same period have decreased by 6.5% from 1,754 to 1,640. The large increase in Expiration/Mandatory releases has continued to alter the relationship between Parole and Expiration/Mandatory releases that has existed in past years. 2,296 or 58.3% of the 3,936 combined Parole and Expiration/Mandatory releases were by Expiration/Mandatory release in CY 1983. Expiration/Mandatory releases accounted for 49.0% of the Expiration/Mandatory-Parole combination in CY 1982 and 27.8% in CY 81. (See data tables at pages 43 & 44 and charts at pages 39 & 40.)

Escape releases, presented on the data tables at pages 43 & 44 and the chart on page 41, have been reduced by 29.3% from 157 in CY 1982 to 111 in CY 1983. Correspondingly, the intake category of Returned from Escape decreased from 254 in CY 1982 to 144 in CY 1983, a 43.3% reduction.

The average length of sentence for new court commitments (see tables at pages 45 and 47) has declined by 2 months from 63 in CY 1982 to 61 months in CY 1983. The most notable reductions in sentence length among the individual jurisdictions occurred in Baltimore City where the average sentence length went from 59 months to 52 months and in Montgomery County, which went from 247 months to 184 months. Life sentences to the Division have declined by 29.7% from 101 in CY 1982 to 71 in CY 1983. Death sentences during the same period dropped from 4 to 0.

The Inmate Characteristics of the Division's population as of the end of CY 1983 are nearly unchanged from the end of CY 1982. The average age of the Division inmates remained at 29 years. The average sentence length of the active inmates at year end increased by 3 months from 129 months at the end of CY 1982 to 132 at the close of CY 1983. The age, sentence, race and offense distributions have remained virtually unchanged between years.

[A] DOC sentenced inmates in local jails (included in monthly totals) are indicated by parens and includes both males and females when applicable.

[B] Averages from January 1977 until June of 1978 were calculated by adding the populations on the 1st, 10th and 20th of the respective month and dividing by 3.

[C] Averages since June of 1978 are based on the total number of days in the respective month for which a population report was received.

[D] Revised figure.

*The numbers (#) listed for each jurisdiction represent the actual number of court commitments for the respective months not including life sentences and death sentences. The average lengths of sentence (avg. LOS) were calculated using the high range of the following sentence ranges: 3 months, 4-6 months, 7-12 months, 13-18 months, 19-24 months, 25-36 months, 37-60 months, 61-96 months, 97-120 months, 121-180 months, 181 months and over. The high range was used because most sentences tend to fall at the upper end of each range. 300 months was used for the 181 months and over category.

*The totals for the inmate characteristics contained in this report, with the exception of the sex distribution table, represent the OBSCIS system data available for the respective categories on the date of the report. The totals on the Sex Distribution table represent the actual total population on the date of the report. Information for an additional 85 inmates housed in local jails and 225 inmates housed at the Roxbury Correctional Institution is not available. The automated information totals presented for Patuxent Institution are over counted by approximately 60 inmates due to data entry inconsistencies.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The 11-month length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is 2 months.

PAROLE COMMISSION (DOC RELATED) STATISTICS

Data Sources

The information contained in the Parole Commission section of the Agency Processing Statistics is based upon data manually tabulated by Parole Commissioners and Hearing Officers and summarized monthly by Parole Commission staff from hearing docket sheets. For the purpose of this report, only those Parole Commission activities relating to Division of Correction inmates are presented and any data relating to local jail inmates is excluded. Although data relating to jails is not subject to this analysis, it is noted that 999 parole hearings were conducted at local jails during Calendar Year 1983 and 1,072 such hearings were conducted in CY 1982.

The Parole Hearing data presented in charts at pages 57, 58, 59, 60 & 61 and the table at page 64 is based upon the decisions rendered by Parole Commission Hearing Officers and Parole Commissioners during an inmate's parole hearing. The four basic decisions that can be made are to 1) approve parole release; 2) refuse parole release; 3) reschedule the inmate for a rehearing at a later date; or 4) hold the decision in abeyance until further information is obtained to determine parole eligibility. The Parole Revocation Hearings dispositions presented in charts at pages 62 & 63 and the table at page 65 are based upon the decision rendered by Parole Commissioners when an inmate has been charged with failing to comply with the conditions of their parole release. These charges of noncompliance with the conditions of release can be divided in two broad categories: New Offenses (where a parolee has been primarily charged with committing a new crime while under parole supervision) and Technical Violations (where the parolee is charged with failing to comply with such conditions of their release as reporting to their agent, absconding from supervision, failing to attend treatment programs as directed, etc.). At the time of a revocation hearing, the Parole Commission can decide to revoke parole, continue parole supervision, hold the case for further information, or administratively close the case.

Recent Trends

During Calendar Year 1983, the Parole Commission conducted a total of 5,908 DOC parole hearings which represents a 3.5% decrease from Calendar Year 1982 (see chart at page 59 and table at page 64). A comparison between calendar years for hearings that resulted in a final disposition (subject to appeal to the Commission) for approval or refusal for parole reflects a variance of roughly 1% (49.5% in 1982 and 50.6% in 1983). The proportion of the total hearings resulting in a future scheduled rehearing varied by approximately 1% in a comparison between calendar years (30.1% in 1982 and 29.1% in 1983). A comparison between calendar years indicates that hearings without an immediate disposition (held) due to the absence of information necessary for a final decision remained essentially unchanged, as a proportion of total hearings, at approximately 20%.

Parole revocation hearings for Calendar Year 1983 totaled 1,045, a reduction of 45 from 1982 or 4.1%. The proportion of violation hearings resulting in revocation for commission of a new offense increased from 57.3% (625 cases) in CY 1982 to 66.8% (698 cases) in CY 1983 (see table at page 65). In Calendar Year 1983, 769 parole cases were revoked (73.6% of cases heard) representing a 7.1% increase in the proportional revocation rate over the 725 cases revoked in CY 1982 (66.5% of cases heard, see charts at pages 62 and 63 and table at page 65). Conversely, the proportional rate of paroles continued decreased by 5.2% (25.0% of total revocation hearings in CY 1982 and 19.8% of total revocation hearings in CY 1983).

PATUXENT INSTITUTION

Data Sources

The information contained in the Patuxent Institution section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized by the Office of Research and Statistics. The data on Average Monthly Population, Institutional Activity, Evaluation Activity, and Discharges is manually compiled monthly by the Patuxent Office of Research and Evaluation based upon internal institution reports (see tables at pages 67 and 68). The Inmates Characteristics Report (see tables at pages 49 thru 55 of the Division of Correction section of this publication) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that the manual population data is used in the Sex Distribution table, at page 49 of this publication, to allow comparisons to be made between the actual population and the computerized count for Patuxent Institution. The remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During CY 1983, the Patuxent Institution average monthly total population has decreased from 609 to 608, which represents only a .2% decrease from the CY 1982 average. Of the total inmates in residence, the number of inmates committed as eligible persons has decreased by 7.5% from 510 in the beginning of CY 1983 to 472 at the end of the calendar year while the number of inmates under evaluation during this period has increased by 27.4% from 95 to 121. The total number of Patuxent inmates under parole supervision has decreased by 8.7% from 103 in the beginning of CY 1983 to 94 at the end of the calendar year. The DOC Housed Inmates category, which represents those DOC inmates that are temporarily housed at Patuxent but are not currently under evaluation for admission to Patuxent's program, has remained relatively constant at an average of 165 during CY 1983. (See Section I of tables at pages 67 and 68.)

The total intake to Patuxent Institution during CY 1983 has decreased by 2.7% to 257 as compared to 264 in CY 1982. Discharges during this period experienced some growth from a total of 266 in CY 1982 to 269 in CY 1983 or an increase of 1.1%. Of particular note in the Discharge data is the decreases among the Escape and Parole categories. Escapes were reduced from a total of 2 in CY 1982 to none in CY 1983. During this same period, Paroles to the Halfway House decreased 36.4% from 11 to 7 and Paroles to the Community decreased 5.0% from 20 to 19. (See Section IV of the tables at pages 67 and 68.)*

The Inmate Characteristics of the Patuxent population as of the end of CY 1983 were relatively unchanged from the end of CY 1982. (See tables at pages 49 thru 55 of the Division of Correction section of this publication).

---

*It should be noted that renovations to the Halfway House at the end of CY 1982 and beginning of CY 1983 limited its capacity and were partially responsible for decreases in the number of paroles during this period.
